

Holcim – Ruggedized tablets

The company

Holcim offers a full range of solutions for the construction of buildings, engineering structures and road works. The aggregates, which are mainly used in all concrete applications, are mined in one of their 5 quarries.

Principal challenges

- Biodiversity management in their quarries for the “Life in Quarries” project.
- Need for constant and stable internet connection.
- User-friendly in extreme conditions.

The solution

6 tablets, 11,6inch – Win10PRO with capacitive touchscreen.

The benefits

The tablets are connected to the internet under all circumstances. They are shock resistant, waterproof (IP64), easy to read in the sun and easy to handle thanks to a wristband that leaves you free to take notes.

Microtron as partner

Microtron, which had equipped all its quarry machines with ruggedized tablets, found a solution suitable for the dynamic management of the “Life in Quarries”

QUICK FACTS

Industry:

- Quarries

Challenge

- Biodiversity management
- Internet connection

Solution

- 6 ruggedized tablets, 11,6” – Win10 PRO with capacitive touchscreen
